

ID: bank\_check

**Textual Workflow Description:** Get the bank statement summary of user 123456. Then check simultaneously whether the user already had financial issues and summarize the last 10 transactions. If the user already had financial issues, write a warning message and send him an email, if not send him an email that the user should be happy. After summarizing the 10 transaction, store the text locally.

Workflow Representation in BPMN and Text

Required iterations: 9

send email to user that he should be happy -> End  
PARALLEL: 2 -> store text locally (issues)  
& store text locally (happy)  
get bank statement summary of user 123456 -> PARALLEL: 1  
PARALLEL: 1 -> check whether user already had financial issues  
& summarize last 10 transactions  
store text locally (issues) -> End  
write warning message -> send email to user with warning  
-> get bank statement summary of user 123456  
send happy message -> send email to user that he should be happy  
store text locally (happy) -> End  
send email to user with warning -> End  
summarize last 10 transactions -> PARALLEL: 2  
EXCLUSIVE: user had financial issues -> write warning message [condition='had issues']  
& send happy message [condition='no issues']  
check whether user already had financial issues -> EXCLUSIVE: user had financial issues
